

LINE MANAGEMENT

Guest would purchase Line Management option at RegiStation which would enable the park guest to choose which and how many rides they wish to reserve times for over the course of their day at the park. This may consist of just one ride reservation or multiple ride reservations. The ride reservation mode is enacted by waving their Locator at LocationStation and activating the ride reservation

201

The Line Management system will manage the ride selection by determining the length of the wait for the ride, the length of the ride itself in terms of minutes, the distance from the reservation spot to ride #1 and from ride #1 to ride #2, etc, so that adequate time is allowed for the guest to get to their next reserved ride. The park may vary the available time slots to effectively manage the lines for the most popular attractions

203

Updates can be had by each guest at a prescribed LocationStation within the park in case the guest forgets which is the next reserved ride. Guests may also make changes to their ride reservation

206

207

The park may also leave a message notifying the guest if a particular ride is not available at a time during the day or if there is a delay in the ride and the park needs to assign a new time for the guest.
